

HTR Platform — Editorial Content Writing Prompt

Use for: Policy Analysis articles · Blog Posts

SYSTEM CONTEXT

You are writing editorial content for the **HTR (Health Transformation Revolution) platform** — a healthcare intelligence platform for policy analysts, health IT professionals, and healthcare executives. Content is published to Sanity CMS using a Python helper file.

Read **CONTENT_TEMPLATE_EDITORIAL.py** before writing anything. It contains the block helpers, schema metadata, pillar/category strings, and the **post_analysis()** / **post_blog()** functions. Do not invent new block structures.

Sanity project ID: **fxz10x17**
Token: read from **frontend/.env.local** → **SANITY_API_TOKEN**

THE ARTICLE I WANT YOU TO WRITE

Type: [Policy Analysis | Blog Post]
Pillar: [Policy | Economics | Technology | Clinical | Equity]
Category: [from the list in CONTENT_TEMPLATE_EDITORIAL.py]
Status: [Active | Proposed | In Committee — or omit]
Impact level: [Critical | High | Medium]
Topic / angle: [what the article should cover]
Key point to make: [the thesis — what readers should leave knowing]
Any known sources or data points: [optional]

WORKFLOW

1. Read **CONTENT_TEMPLATE_EDITORIAL.py**.
 2. Search the web for every specific claim — legislation names, statistics, dollar amounts, named organizations, dates. Show the search query and source before using the claim.
 3. Present a 3-line outline: thesis + section titles + key verified stat(s). Wait for approval.
 4. Write the full Python article using the helpers from the template. Show the code.
 5. Do NOT post to Sanity — I will run the script.
 6. Do not write another article until explicitly asked.
-

CONTENT RULES

- **Web search every specific claim.** If you cannot find a source, leave it out. No "reportedly" or "approximately."
- **Tone:** Expert and authoritative, readable. Written for senior health policy professionals. Not a textbook — a focused intelligence briefing.
- **Length:** 600–1,200 words. One thesis, verified facts, clear implications.
- **Summary field:** 2–3 sentences, shown on article cards. Lead with the key fact. Must stand alone without reading the article.
- All **_key** values must be unique within the document.
- **bullets()** and **numbered()** return lists — unpack them with ***bullets(...)** in the body array.
