

Health Transformation Review — Content Guide

For content creators, editors, coaches, and analysts who publish through Sanity CMS.

Accessing the Studio

The Sanity Studio is embedded directly in the HTR platform.

- **URL:** `https://your-domain.com/studio`
- **Local dev:** `http://localhost:3000/studio`

You need a Sanity account with access to the `fxz10xl7` project to log in.

The Five Pillars

All content must be assigned to one of five pillars. These organize navigation, search, and AI context.

Pillar	Value Used in Fields
Policy	<code>Policy</code>
Economics	<code>Economics</code>
Technology	<code>Technology</code>
Clinical	<code>Clinical</code>
Equity	<code>Equity</code>

Document Types Reference

The Studio manages 21 document types. Below is the complete reference for each.

1. Policy Analysis (`policyAnalysis`)

The primary content type. Full analytical articles published across all five pillars.

Required fields:

- `title` — Article headline
- `pillar` — One of the five pillars (radio selection)
- `category` — One of 20 subcategories (see below)

Optional fields:

- `slug` — Auto-generated from title. Determines the URL: `/policy/[slug]`
- `status` — `Active`, `Proposed`, or `In Committee`
- `impactLevel` — `Critical`, `High`, or `Medium`
- `publishedAt` — Publication datetime
- `summary` — 2–3 sentence executive abstract. Shown on article cards and hub pages.
- `body` — Full article content (Portable Text / `blockContent`)

The 20 subcategories:

Pillar	Subcategory
Policy	Regulation & Legislation
Policy	Public Health Mandates
Policy	Global & Comparative Policy

Pillar	Subcategory
Policy	Policy Feasibility Studies
Economics	Value-Based Care Models
Economics	Market & Finance
Economics	Labor & Workforce Strategy
Economics	Healthcare Investment Trends
Technology	AI & Machine Learning
Technology	Digital Health & Telemedicine
Technology	Data Security & Governance
Technology	Tech-Enabled Workflow
Clinical	Hospital-at-Home
Clinical	Precision Medicine
Clinical	Virtual Care Models
Clinical	Population Health
Equity	SDOH Integration
Equity	Algorithmic Bias
Equity	Access Disparity
Equity	Community Engagement

Studio preview shows: pillar emoji + pillar name + status + impact level.

2. Post (post)

Standard blog-style article. Simpler than policyAnalysis — no pillar/category system.

Fields:

- title — Post headline
- slug — URL: /articles/[slug]
- author — Reference to an author document
- publishedAt — Publication datetime
- body — Full content (blockContent)

3. Academy Module (academyModule)

A single learning unit within a course. This is the main Academy content type.

Required fields:

- title — Module title
- slug — URL: /academy/modules/[slug]
- courseTitle — Name of the parent course (text, not a reference)
- moduleNumber — Position in course sequence (1, 2, 3...)
- summary — 3–4 sentence abstract

Optional fields:

- totalModules — Total modules in parent course (used for progress display "2 of 5")
- prevModuleSlug — Slug of the preceding module (leave blank for Module 1)
- nextModuleSlug — Slug of the following module (leave blank for last module)

- `pillar` — Primary pillar (Policy/Economics/Technology/Clinical/Equity/All)
- `level` — `Foundational`, `Intermediate`, or `Advanced`
- `estimatedReadTime` — Minutes to complete
- `publishedAt` — Publication datetime
- `learningObjectives` — Array of strings (3–5 objectives, "After this module you will be able to...")
- `body` — Full module content (blockContent)

Important: The `prevModuleSlug` and `nextModuleSlug` fields enable navigation between modules. Always set both directions when creating a sequence. Leave blank for the first and last modules respectively.

4. Course (`course`)

A structured collection of academy modules.

Use this to: Define the course's overall metadata. Individual modules reference the course by `courseTitle` string.

5. Case Study (`caseStudy`)

Real-world implementation examples. Displayed in the Academy case studies section.

Fields are similar to `policyAnalysis` — title, slug, pillar, summary, body.

6. Webinar / Event (`webinar`)

Live or upcoming webinar events.

Required fields:

- `title` — Event title
- `slug` — URL: `/academy/webinars/[slug]`
- `pillar` — One of the five pillars
- `date` — Date and time (critical for sorting upcoming vs. past)

Optional fields:

- `description` — Short summary (shown on listing page)
- `duration` — e.g., "60 Min"
- `registrationLink` — External URL for registration
- `image` — Event banner image (supports hotspot cropping)

7. Report (`report`)

Advisory reports and research documents.

Fields: title, slug, pillar, abstract, body content.

8. Analyst Note / The Signal (`analystNote`)

Short editorial notes that appear in the left sidebar. These are "The Signal" — the analyst's current take.

Required fields:

- `headline` — Topic/headline (max 50 characters)

Optional fields:

- `isActive` — Toggle visibility (unchecked = hidden from site)
- `content` — The insight text (Portable Text with bold/italic only — keep it punchy)
- `author` — Analyst name (default: "Chief Editor")

Guidance: Keep these short and impactful. Bold key phrases. One or two tight paragraphs maximum.

9. Glossary Definition (**definition**)

Terms and acronyms for the Academy glossary. Searchable and indexed in the AI knowledge base.

Required fields:

- **term** — The term or acronym (e.g., "APM", "SDOH")
- **description** — Plain text definition

Optional fields:

- **pillars** — Tag with associated pillars (multiple allowed, tag layout)

10. System Vitals Ticker (**ticker**)

Metrics that scroll across the platform ticker strip (not headlines — these are data points).

Required fields:

- **label** — Metric name (e.g., "ER Wait Time (Avg)")
- **value** — Current value (e.g., "4.2 Hours")

Optional fields:

- **trend** — Context (e.g., "+12% YoY", "Critical")
- **status** — Color coding: **good** (green), **warning** (orange), **critical** (red), **neutral** (blue)

Note: The live ticker in the header pulls from RSS feeds (not this collection). This collection feeds the AppShell ticker strip below the header.

11. Daily Insight (**dailyInsight**)

Short daily intelligence notes. Separate from analyst notes.

12. RHT State Profile (**rhtState**)

State-level data for the RHT (Rural Health Transformation) program dashboard.

Required fields:

- **stateId** — Lowercase slug, e.g., **new_hampshire**
- **stateName** — Full state name

Optional fields:

- **awardAmount** — e.g., "\$195,000,000"
- **status** — **Active**, **Pending**, or **At Risk**
- **strategicFocus** — One-line strategic focus statement
- **description** — 4-sentence program description (textarea)
- **initiatives** — Array of strategic initiatives (each with **title** + **description**)
- **metrics** — Array of key metrics (each with **label**, **status** [Pending/In Progress/Achieved], **target**)

13. State Performance Index (**statePerformanceIndex**)

Performance scoring data for states. Used in dashboard charts.

14. Hospital (**hospital**)

Hospital-specific data and profiles. Used in `/dashboard/[state]/hospitals`.

15. Subscriber (`subscriber`)

Email list entries. Created automatically by `/api/subscribe`.

Fields:

- `email` — Subscriber email
- `tier` — `free` or paid tier
- `isActive` — Whether they receive digests
- `digestEnabled` — Whether to include in weekly digest sends
- `subscribedAt` — ISO datetime

Do not create or edit these manually unless necessary (e.g., re-activating someone who unsubscribed).

16. Author (`author`)

Author profiles referenced by `post` documents.

Fields: name, bio, image.

17. Instructor (`instructor`)

Faculty profiles for the Academy.

Fields: name, bio, credentials, image.

18. Audio (`audio`)

Audio content for article-level listen features.

19. Category (`category`)

Content categories (legacy). Pillar + category fields in `policyAnalysis` are the active taxonomy system.

20. blockContent (base type)

Not a document type — this is the shared rich text definition used in all body fields. See the "Writing Body Content" section below.

Writing Body Content (Portable Text / blockContent)

All `body` fields use Sanity's Portable Text with these block types available:

Text styles:

- Normal
- H2, H3, H4 (use for section structure)
- Blockquote (for pull quotes or key takeaways)

Lists:

- Bullet list
- Numbered list

Inline marks:

- Bold, italic, underline, code (inline)

- Links (external URL or internal document reference)

Custom blocks (inserted via the toolbar "+" button):

- **Image** — with alt text and caption
- **Audio player** — embed audio content
- **Video** — embed video content
- **Code block** — for technical content
- **Call-out / highlighted note**

For AI indexing: The backend extracts `pt::text(body)` from body fields when indexing into the RAG system. Structured headings and clear prose improve AI retrieval quality.

Workflow: Publishing a New Policy Analysis

1. In the Studio, go to **Policy Analysis** in the left sidebar
2. Click **+ New document**
3. Fill required fields: `title`, `pillar`, `category`
4. Write the `summary` (2–3 sentences) — this appears on article cards
5. Write the `body` (full article)
6. Set `impactLevel` and `status` as appropriate
7. Set `publishedAt` to now (or schedule for future)
8. Click **Publish**
9. The article is immediately live at `/policy/[slug]`
10. To add it to the AI knowledge base, trigger a re-index: `POST /api/ingest`

Workflow: Publishing an Academy Module

1. Go to **Academy Module** in the Studio
2. Create a new document
3. Set `title`, `courseTitle`, `moduleNumber`
4. Set `pillar` and `level`
5. Write `learningObjectives` (3–5 items)
6. Write `summary` (3–4 sentences)
7. Set `estimatedReadTime`
8. Connect navigation: set `prevModuleSlug` (slug of the previous module) and `nextModuleSlug` (slug of the next module)
9. Write `body` content
10. Publish

Navigation tip: When creating a series, create all modules first, then go back and set the prev/next slugs. The slug is auto-generated from the title — check it in the slug field before using it as a reference.

Workflow: Creating a Webinar

1. Go to **Webinar / Event**
2. Fill title, pillar, and **date** (required for sorting)
3. Add description, duration, registration link, and banner image
4. Publish — appears at `/academy/webinars`
5. Past events (date in the past) are shown as "On-Demand" or "Past"
6. Upcoming events appear at the top sorted by date

Workflow: Publishing a Daily Insight or Analyst Note

Analyst Note (The Signal sidebar)

1. Go to **The Signal (Sidebar Note)**

Type	Fields Indexed
webinar	title, pillar, description
report	title, pillar, abstract

Important:

- Only documents with a defined slug are included (except **definition** and **analystNote**)
- Maximum 8,000 characters per document in the index
- Documents shorter than 20 characters are skipped
- After publishing significant new content, trigger a re-index so the AI can reference it

Content Quality Guidelines

For Policy Analysis Articles

- Keep **summary** to 2–3 sentences. This is what appears on article cards — make it compelling.
- Use H2 headings to organize the body into clear sections
- Cite specific data, policy names, and report names — the AI will reference these by name in answers
- **impactLevel: Critical** should be reserved for content with immediate, high-stakes implications
- Always set the **pillar** and **category** — they determine which hub page the article appears on

For Academy Modules

- Learning objectives should be action-oriented ("Analyze X", "Evaluate Y", "Apply Z")
- Write summaries in the third person ("This module explores...")
- Connect prev/next module slugs carefully — broken navigation degrades the learner experience
- The AI knowledge base indexes **learningObjectives** — write them in full sentences

For Analyst Notes (The Signal)

- Maximum two active at a time
- Write for a senior healthcare executive audience
- Lead with the data or the implication, not the background
- Bold 1–2 key phrases per note

For Glossary Definitions

- Define in plain language first, then technical language
- Include the full expansion of any acronym in the first sentence
- Keep descriptions under 150 words
- Tag all relevant pillars — this improves search and AI retrieval
