

HTR Platform — Project Brief

Paste this at the start of every new Claude session. Upload repomix-output.txt for code sessions.

Stack

- **Frontend:** Next.js 15 (App Router), TypeScript, Tailwind CSS
- **CMS:** Sanity (Studio at `/studio`), dataset: production
- **DB:** Supabase (secondary)
- **Hosting:** (deploy target TBD)
- **Working dir:** `frontend/`

Key File Paths

What	Path
Sanity schema types	<code>frontend/sanity/schemaTypes/</code>
Schema index	<code>frontend/sanity/schemaTypes/index.ts</code>
Sanity client	<code>frontend/sanity/lib/client.ts</code>
Article renderer	<code>frontend/components/ArticleContent.tsx</code>
Article page template	<code>frontend/components/templates/ArticleEngine.tsx</code>
Academy module template	<code>frontend/components/templates/AcademyModuleEngine.tsx</code>
Article route	<code>frontend/app/analysis/[slug]/page.tsx</code>
Academy module route	<code>frontend/app/academy/modules/[slug]/page.tsx</code>
Import script (articles)	<code>frontend/scripts/import_one.js</code>
Import script (academy)	<code>frontend/scripts/import_academy.js</code>
Content staging (articles)	<code>frontend/sanity/content/</code>
Content staging (academy)	<code>frontend/sanity/content/academy/</code>

Content Types in Sanity

Type	Used For
<code>policyAnalysis</code>	Pillar articles (Policy/Economics/Technology/Clinical/Equity)
<code>academyModule</code>	HTR Academy course modules
<code>course</code>	Course listing pages (existing)
<code>caseStudy, webinar, report</code>	Other academy content (existing)

The 5 HTR Pillars

Policy · Economics · Technology · Clinical · Equity
Pillar colors: Policy=orange, Economics=emerald, Technology=indigo, Clinical=rose, Equity=violet

Article Generation

- Prompt: `ultimate_prompt_v3.txt` (in `outputs/htr-content/`)
- CONTENT_MODE: `POLICY_BRIEF | ACADEMY_MODULE | RESEARCH_REPORT`
- Min 35 body blocks, 60+ word paragraphs, mandatory audio + video blocks
- Import articles: `node scripts/import_one.js <file>.json`
- Import academy modules: `node scripts/import_academy.js <file>.json`
- Block types: block (normal/h2/h3/quote/callout/bullet/number), code (json tables), image, audio, video

Key Decisions Made

- Image blocks have NO asset ref in JSON — must upload image manually in Sanity Studio after import
- GROQ queries must use `asset->{ _id, _ref, url }` to dereference image assets (not plain `body`)
- ArticleContent.tsx has explicit Tailwind classes on all block styles (no prose wrapper dependency)
- ArticleEngine.tsx uses `{ cache: "no-store" }` to bypass CDN cache after publishing
- Academy modules use separate `academyModule` schema with `courseTitle`, `moduleNumber`, `learningObjectives`, `prevModuleSlug/nextModuleSlug` navigation fields
- policyAnalysis schema has all 5 pillars in dropdown (was only 3 — fixed)

Content Generated So Far

- 20 policyAnalysis articles (all pillars, in `outputs/htr-content/articles/`)
- 5 academyModule VBC Fundamentals course modules (in `outputs/htr-academy-modules/`)
- 1 long-form test article: `medicaid-dsh-rural-hospital-fiscal-collapse-2026.json`
- Company pages: About, Mission, Methodology, FAQ, Footer (in `outputs/htr-company-pages/`)

Current Status / What Was Last Worked On

[UPDATE THIS EACH SESSION with what you're working on]

- Academy module schema, import script, and AcademyModuleEngine template: BUILT, not yet deployed
- All 5 VBC modules: ready to import as academyModule type from `outputs/htr-academy-modules/`
