

Feature Guide: Voice Interface

Health Transformation Review (HTR) Platform

What Is the Voice Interface?

HTR's Voice Interface lets you navigate the platform, search for content, and interact with the AI Analyst entirely hands-free. It combines speech-to-text input with text-to-speech AI responses.

Activation: Press **⌘⇧V** (Mac) or the microphone button in the UI

Browser Support

Browser	Support
Chrome / Chromium	Full support (recommended)
Edge	Full support
Safari	Partial (Web Speech API limitations)
Firefox	Limited

Voice features require microphone permission. When prompted, click **Allow**.

Activating Voice

Keyboard Shortcut

Press **⌘⇧V** (Command + Shift + V on Mac) from anywhere on the platform.

UI Button

Look for the microphone icon in:

- The AI Analyst chat input area
- The top navigation bar (on supported pages)

From the Chat Page

Navigate to `/chat` — the voice toggle is prominently displayed in the chat interface.

What You Can Do With Voice

1. Ask the AI Analyst

Speak your question naturally. The AI responds in audio (text-to-speech):

- *"What are the key requirements of Vermont Act 167?"*
- *"Summarize the global budget transition modeler results"*
- *"What tools does HTR have for Medicaid eligibility analysis?"*

2. Navigate the Platform

Speak navigation commands:

- "Go to the Research Lab"
- "Open the 50-State Dashboard"
- "Take me to the Vermont Medicaid page"
- "Open the FHIR lab"

3. Search

- "Search for hospital-at-home"
- "Find content about Vermont Act 68"
- "Search for APM design tools"

4. Control the Interface

- "Scroll down"
- "Open the AI chat"
- "Go back"
- "Bookmark this page"

Voice Interaction Tips

Tip	Details
Speak clearly	The platform uses your browser's speech recognition engine
Pause before speaking	Wait for the microphone indicator to show it's listening
Use natural language	You don't need special command syntax
Quiet environment	Background noise reduces accuracy
Follow-up questions	The AI Analyst maintains context between voice turns

Text-to-Speech (AI Audio Responses)

When voice mode is active, AI Analyst responses are read aloud. You can:

- Interrupt the AI at any time by speaking
- Press ⌘⇧V to toggle voice off and return to text-only mode
- Adjust your system volume to control audio output

Voice quality and speed depend on your browser and operating system's TTS engine.

Use Cases for Voice

Hands-free research — Review platform content while taking notes by hand or in another application

Commute / travel — Listen to AI analysis while driving or on the go (use responsibly)

Accessibility — Full platform functionality for users who prefer or require voice interaction

Multi-tasking — Query the AI Analyst while working in another tool without switching windows

Troubleshooting

Issue	Solution
Microphone not working	Check browser permissions (Site Settings > Microphone)
AI not responding to voice	Ensure you see the "listening" indicator before speaking

Issue	Solution
No audio from AI	Check system volume; try toggling voice off and back on
Voice not activating with ⌘⇧V	Ensure the HTR browser tab is focused
Recognition errors	Speak more slowly; use Chrome for best accuracy

Deactivating Voice

- Press ⌘⇧V again to toggle off
 - Click the microphone button to turn it off
 - Navigate away from the page (voice resets per page)
