

Quick-Start Guide: Clinician (MD, NP, PA)

Health Transformation Review (HTR) Platform

Your Role on HTR

As a clinician — physician, nurse practitioner, or physician assistant — HTR gives you:

- Clinical innovation intelligence across hospital-at-home, precision medicine, virtual care, and genomics
 - Population health and health equity analysis tools
 - AI-powered research for clinical policy questions
 - Continuing education through the HTR Academy
-

Step 1: Set Your Role

At **/welcome**, click "**Clinician (MD, NP, PA)**".

The AI will open ready to help with hospital-at-home models, precision medicine, clinical quality, health equity, or any other clinical topic you raise.

Step 2: Your 5 Most Valuable Destinations

1. Clinical Hub — **/clinical**

The primary intelligence layer for clinical content:

- **Hospital-at-Home** (**/clinical/hah**) — regulatory landscape, clinical protocols, CMS waiver status
- **Precision Medicine** (**/clinical/precision**) — genomics, biomarkers, targeted therapy
- **Virtual Care Models** (**/clinical/virtual**) — telehealth policy, reimbursement, outcomes
- **Genomics & Predictive Medicine** (**/clinical/genomics**) — emerging applications and policy
- **Population Health Management** (**/clinical/population**) — risk stratification, panel management

2. Health Equity Studio — **/research-lab/population-equity?tab=equity**

Model equity gaps across demographics and geographies. Explore SDOH drivers, access disparities, and algorithmic bias in clinical tools. Essential for quality improvement and DEI reporting.

3. Population Health Modeler — **/research-lab/population-equity?tab=population**

Build population health models: risk stratification, chronic disease burden, preventive care impact. Useful for panel management and APM quality metric planning.

4. Clinical Quality Optimizer — **/research-lab/policy-quality?tab=quality**

Optimize clinical quality metrics — HEDIS, CMS Star Ratings, VBC quality bonuses. Model the impact of protocol changes on your quality scores.

5. AI Analyst — /chat

Ask clinical policy questions in plain language:

- "What does the current CMS Hospital-at-Home waiver cover?"
- "What are the evidence-based quality metrics for a diabetes management program?"
- "How does Vermont's Act 167 affect clinical quality reporting requirements?"

Step 3: Key Workflows

Staying Current on Clinical Policy

1. Check **The Wire** (/the-wire) for clinical and regulatory news
2. Browse **Clinical hub** sub-sections for in-depth analysis
3. Ask the AI: "Summarize what changed in CMS's hospital outpatient prospective payment system this year"
4. Set alerts at /connect/alerts for clinical topics

Preparing for a Value-Based Care Transition

1. Take the **VBC Readiness Assessment** (/research-lab/knowledge-workspace?tab=readiness)
2. Review your clinical quality metrics in the **Clinical Quality Optimizer**
3. Model population risk in the **Population Health Modeler**
4. Ask the AI for guidance on specific quality measures you need to hit

Understanding Health Equity in Your Practice

1. Go to **Equity hub** (/equity)
2. Explore **SDOH** (/equity/sdoh), **Algorithmic Bias** (/equity/bias), and **Access Disparity** (/equity/access)
3. Use the **Health Equity Studio** to model gaps in your patient population
4. Check the **Bed Capacity & Transfer tool** (/bed-capacity) for regional access data

Continuing Education

1. Visit **HTR Academy** (/academy)
2. Start with **Personalized Learning** (/academy/personalized-learning) — select Clinician role
3. Browse courses by pillar (Clinical, Equity, Policy)
4. Register for webinars (/academy/webinars) — expert-led clinical and policy sessions

Step 4: Research Lab Tools for Clinicians

Tool	Location	Use Case
Population Health Modeler	/research-lab/population-equity?tab=population	Risk stratification, panel modeling
Health Equity Studio	?tab=equity	SDOH and equity gap analysis
Clinical Quality Optimizer	/research-lab/policy-quality?tab=quality	Quality metric optimization
AI Clinical Governance Lab	/research-lab/technology-ai?tab=ai	AI governance in clinical settings

Tool	Location	Use Case
VBC Readiness Assessment	/research-lab/knowledge-workspace?tab=readiness	Org-level VBC readiness
Risk Stratification Engine	/research-lab/interoperability?tab=risk	Patient risk scoring models

Step 5: Academy Courses for Clinicians

Navigate to /academy/tracks and look for:

- **Clinical Innovation Track** — hospital-at-home, virtual care, precision medicine
- **Population Health Track** — panel management, risk stratification, quality metrics
- **Health Equity Track** — SDOH, DEI in clinical practice, algorithmic bias

All courses include case studies from real health system implementations.

Getting Help

- **AI Analyst:** Ask any clinical or policy question
- **Glossary:** /academy/glossary — definitions across all clinical and policy terms
- **Ask HTR:** /connect/ask — submit complex questions to the expert team
- **Voice:** Press **⌘⇧V** for hands-free queries while reviewing patient data or research
