

Quick-Start Guide: Health Tech Professional

Health Transformation Review (HTR) Platform

Your Role on HTR

As a health technology professional — working in health IT, digital health product development, AI in healthcare, or FHIR/interoperability — HTR gives you:

- Technical intelligence on AI governance, FHIR standards, digital health ROI, and cybersecurity
 - Hands-on research tools for interoperability and AI governance analysis
 - API access to HTR's data and AI capabilities
 - Developer documentation and integration resources
-

Step 1: Set Your Role

At `/welcome`, click **"Health Tech Professional"**.

The AI will open ready for AI governance questions, FHIR interoperability issues, digital health ROI analysis, or any technical healthcare topic.

Step 2: Your 5 Most Valuable Destinations

1. Technology Hub — `/technology`

The primary intelligence layer for health tech:

- **AI & Machine Learning** (`/technology/ai`) — AI adoption, governance, CMS AI rules
- **Digital Health & Telemedicine** (`/technology/digital`) — digital health regulation, reimbursement, market
- **Data Security & Governance** (`/technology/security`) — HIPAA, cyber threats, data governance frameworks
- **Tech-Enabled Workflow** (`/technology/workflow`) — EHR optimization, clinical workflow tools

2. FHIR Interoperability Lab — `/research-lab/interoperability?tab=fhir`

Test and model FHIR R4 data exchange scenarios. Explore HL7 FHIR resource types, CMS interoperability rule compliance, and API design patterns for healthcare data exchange.

3. AI Clinical Governance Lab — `/research-lab/technology-ai?tab=ai`

Explore AI governance frameworks for clinical settings: model validation, bias testing, FDA SaMD requirements, CMS coverage policies. Build governance checklists for AI deployment.

4. Digital Health Lab — `/research-lab/technology-ai?tab=digital`

Analyze digital health product ROI, reimbursement pathways (remote patient monitoring, digital therapeutics), and regulatory clearance requirements.

5. Developer Hub — /developers

API documentation, authentication, and integration guides. Generate and manage API keys at /account/api-keys. Access HTR's data endpoints for research and integration.

Step 3: Key Workflows

FHIR Implementation Analysis

- 1. Go to the **FHIR Interoperability Lab** (/research-lab/interoperability?tab=fhir)
- 2. Explore CMS interoperability rule requirements (Patient Access API, Provider Directory API)
- 3. Ask the AI: *"What are the CMS Information Blocking rule requirements for EHR vendors in 2025?"*
- 4. Read in-depth coverage at **Technology > Digital Health** (/technology/digital)

AI Governance Framework

- 1. Open the **AI Clinical Governance Lab** (/research-lab/technology-ai?tab=ai)
- 2. Work through the FDA SaMD classification framework
- 3. Build a governance checklist for your AI tool
- 4. Ask the AI: *"What are the key requirements in ONC's HTI-2 rule for AI decision support?"*
- 5. Read **Technology > AI & Machine Learning** for policy context

Digital Health Product Positioning

- 1. Use the **Digital Health Lab** (/research-lab/technology-ai?tab=digital)
- 2. Map reimbursement pathways: CPT codes for RPM, digital therapeutics coverage criteria
- 3. Model ROI with the financial tools under Research Lab > Payment Models
- 4. Check **The Wire** for FDA clearance news and CMS coverage decisions

Risk Stratification Tool Development

- 1. Go to **Risk Stratification Engine** (/research-lab/interoperability?tab=risk)
- 2. Explore clinical risk scoring models and their data requirements
- 3. Cross-reference with **Population Health Modeler** (/research-lab/population-equity?tab=population)
- 4. Ask the AI about FHIR data elements needed for your model

Step 4: Research Lab Tools for Tech Professionals

Tool	Location	Use Case
FHIR Interoperability Lab	interoperability?tab=fhir	FHIR R4, CMS API rules
Risk Stratification Engine	?tab=risk	Clinical ML model design
AI Clinical Governance Lab	technology-ai?tab=ai	AI governance, FDA SaMD
Digital Health Lab	?tab=digital	Digital health regulation, ROI
Transformation Scorecard	knowledge-workspace?tab=scorecard	Org tech readiness
Research Workspace	?tab=workspace	Multi-tool research environment

Step 5: API & Developer Access

HTR offers API access for subscribers:

1. **Generate API keys** at /account/api-keys
2. **Read API docs** at /developers — covers authentication, endpoints, rate limits
3. Available data: pillar content, state metrics, research lab outputs, glossary

Use cases: integrate HTR intelligence into your product's knowledge base, automate policy monitoring, build custom dashboards on top of HTR's 50-state data.

Step 6: Stay Current

- **The Wire** (/the-wire) — real-time health tech news (FDA, ONC, CMS tech rules)
 - **Trending Topics** (/trending-topics) — what's getting attention on the platform
 - **Policy Alerts** (/connect/alerts) — subscribe to technology pillar alerts
 - **HTR Connect** (/connect) — join the Technology Pillar Circle for peer discussion
-

Getting Help

- **AI Analyst:** Technical policy questions, FHIR queries, AI governance guidance
 - **Ask HTR:** /connect/ask — submit detailed technical questions
 - **Advisory Hub:** /advisory-hub — IT consulting and regulatory counsel services
 - **Voice:** Press  **V** for hands-free queries
-
