

Reusable Prompt — Apply HTR Book Formatting to New Content

Paste this prompt (and the new content) into a session whenever you add or revise manuscript content and want it styled consistently with the existing book.

PROMPT TO USE

You are formatting new content for **Transforming American Healthcare** (HTR book).
The manuscript is HTR_Book_v41.md; the styled output is built by the pipeline in book-build/ (read book-build/README.md and book-build/TEMPLATES.md first — they define the entire visual system). Apply the EXISTING styles only; do not invent new ones, fonts, or colors.

Rules, in priority order:

- 1. Consistency over novelty.** Every visual treatment must use one of the established fenced-div styles (StatStrip, CalloutBeyond, CalloutWorked, CalloutTry, CalloutKey, CalloutVT, Banner, PullQuote/QuoteAttr, Epigraph) or the auto-treatments (Key Concepts, Sources, captions, tables) exactly as documented in TEMPLATES.md. No ad-hoc bold-as-heading, no new box colors, no centered/oversized quotes.
- 2. Clean the source.** Remove export artifacts (escaped \. \+ \~ \), duplicated stat-card labels, single-column pseudo-tables, glued captions, reversed 123\$ → \$123, redundant chapter breadcrumbs). The scripts transform.py, fix_statcards.py, restore_lists.py, wrap_vip.py exist for these; reuse them on a copy first.
- 3. Numbers → stat strips. Quotes → pull-quotes. Vermont examples → green CalloutVT. Definitions → Key Concepts format. Sources → small italic.** Match like content to its established treatment.
- 4. Tables:** pipe tables for normal data (add a *Table X.Y – ...* caption right after, no blank line gap); grid tables when a cell needs a bullet list. Never leave a single-column pseudo-table — convert to a heading + list or a callout.
- 5. Leverage the platform and Academy — this is the book's selling point.** Where a reader would benefit from a tool, add a TRY THIS box with the real tool path (verify against frontend/lib/taxonomy/tools.ts). Where they'd benefit from a course, add a GO DEEPER – HTR Academy (CalloutVT) box naming the specific course. Don't fabricate tool paths or course names.
- 6. Facts:** reconcile any dates/figures to current reality (e.g. AHEAD Cohort 2 performance year = **January 2028**, not 2027; reference the live numbers in the existing manuscript). Flag conflicts rather than guessing.
- 7. Placement by judgment, not by copying.** If pulling from an older version, place content where its context lives in the current manuscript and check it does not duplicate something already present. Do not add-then-delete.
- 8. Build and verify.** After editing, run:
python3 book-build/make_reference.py && python3 book-build/build_docx.py HTR_Book_v41.md book-

build/HTR_Book_v41.docx --cover book-build/cover.png
then confirm: 0 escaped artifacts, 0 single-column pseudo-tables, all
callouts
in the known style set, chapter/appendix counts unchanged unless intended.

9. **If chapters are renumbered or added**, update
frontend/lib/taxonomy/chapters.ts,
tools.ts, programs.ts, the /book page, and **regenerate narration audio**
(TTS) — chapter audio is keyed to chapter number and will silently
mismatch
otherwise.
 10. **Never hand-edit the .docx** — it is generated. Edit the Markdown and
rebuild.
-

Quick checklist for the human (before accepting a formatting pass)

- ☐ Built without errors; .docx opens cleanly in Google Docs/Word
- ☐ All boxes/quotes/stats use the established styles (visually consistent)
- ☐ Tables full-width, navy header, captions hugging them
- ☐ New tool/course links resolve to real platform paths
- ☐ No duplicated content vs. what already exists
- ☐ Dates/figures current
- ☐ If chapters changed: taxonomy + narration updated
