

HTR Book — Formatting & Build Pipeline Documentation

This folder contains everything that turns the Markdown manuscript (HTR_Book_v41.md, in the repo root) into the styled Word document (HTR_Book_v41.docx). Keep this folder. It is how all formatting/styling is applied, and it is reusable for every future edition and every new piece of content.

Golden rule: the manuscript lives in Markdown (./HTR_Book_v41.md). The .docx is *generated* — never hand-edit the .docx, because the next build overwrites it. Edit the Markdown, then rebuild.

1. How to build the styled book (the only command you need)

```
cd /Users/baba/Vermont-Health-Platform
python3 book-build/make_reference.py          # (re)builds the Word style template
python3 book-build/build_docx.py HTR_Book_v41.md book-build/HTR_Book_v41.docx --cover book-build/cover.png
```

- Requires: pandoc (3.x) and Python python-docx. (Pillow only needed if you regenerate the sequence graphic.)
- Output: book-build/HTR_Book_v41.docx.
- For a print PDF: open that .docx in Word/Google Docs → **Download as PDF** (preserves all styling). No local PDF engine matches the docx styling.

2. File-by-file reference

Build pipeline (the core — keep all of these)

File	What it does	Re-run when
make_reference.py	Builds reference.docx, the Word stylesheet : body font (Georgia 11), navy Calibri headings, all custom paragraph styles (callouts, StatStrip, PullQuote, Banner, Epigraph, Caption), the HTR table style, page setup. Edit this to change fonts/colors/sizes globally.	You change any global style.
build_docx.py	The engine. Runs Pandoc (Markdown→docx with the reference styles) then a Python post-pass that renders all the visual treatments: stat-strip cards, callout boxes, pull-quotes, banner, Key-Concepts styling, captions, page breaks, the real TOC, list keep-together, table widths, cover image. This is where every visual rule lives.	Every build; edit to add/adjust a treatment.
reference.docx	Generated by make_reference.py — the Pandoc style template. Don't hand-edit; regenerate it.	Auto (don't touch).

Content-transform scripts (one-time cleanups — kept for reference / reuse on new content)

These were used to clean the v40→v41 manuscript. They are **idempotent** (safe to re-run) and useful if you paste in new raw/exported content that has the same artifacts.

File	What it does
transform.py	Removes export-artifact escaped chars (\. \+ \~ \) \() and converts inline **BEYOND VERMONT → ** *...* lines into CalloutBeyond fenced divs.
restore_lists.py	Detects bullet lists that an export flattened into plain paragraphs and restores – markers. Conservative; run on a copy first.
fix_statcards.py	Converts broken single-row "stat-card" pipe tables (with duplicated labels) into clean CalloutKey/StatStrip strips.
wrap_vip.py	Wraps each Vermont in Practice: block in a CalloutVT green fenced div.
add_handson.py	Inserts the "Work This Chapter on the Platform" sections into pillar chapters.
make_sequence_graphic.py	Generates sequence_graphic.png (the crisp 6-stage timeline figure) with Pillow. Edit the STAGES list to change content/colors.

Assets

File	What it is
cover.png	Book cover image, placed on page 1 by build_docx.py --cover.
sequence_graphic.png	The 6-stage execution-sequence figure (Figure 1.2a). Regenerate via make_sequence_graphic.py.
HTR_Book_v41.docx	The built book. Regenerated every build.
slice.md, HTR_Book_v41_PR00F.docx, word/	Scratch/proof artifacts from development — safe to delete.

3. The callout / visual style catalog

All visual treatments are invoked from the Markdown with **Pandoc fenced divs** (::: {custom-style="NAME"}). The post-pass in build_docx.py renders each. This is the consistent vocabulary — use these and nothing else, so styling stays uniform.

Style name	Look	Use for
StatStrip	Horizontal navy cards: big number + small label	3–4 headline numbers
CalloutBeyond	Teal box, "BEYOND VERMONT"	Generalizing Vermont's lesson to other states
CalloutWorked	Amber box, "WORKED EXAMPLE"	Worked numeric/scenario walkthroughs
CalloutTry	Indigo box, "TRY THIS"	Hands-on platform exercises
CalloutKey	Slate box, "KEY ..."	Key numbers / key takeaways / framed lists
CalloutVT	Green box, "VERMONT IN PRACTICE" / "VERMONT EVIDENCE" / "GO DEEPER"	Vermont applied examples, evidence, Academy pointers
Banner	Full-width light-navy bar, centered	A single punchy thesis statement
PullQuote + QuoteAttr	Italic quote + small attribution	Attributed quotations
Epigraph	Indented italic	Section/chapter opener epigraph

Plus automatic treatments (no markup needed — the post-pass detects them):

- **Key Concepts** sections → term in **bold blue (#2E74B5) 10pt**, definition 9pt.
- **Sources** blocks → small 9pt italic gray.
- **Figure/Table captions** (*Figure X – ...*) → small italic, hugging the table above.
- **Tables** → full text width, navy header, content-driven column widths.

See TEMPLATES.md (in this folder) for copy-paste Markdown for each.

4. Fonts / sizes (current)

- **Body:** Georgia 11pt, 1.3 line spacing
- **Headings:** Calibri, navy #1B3A6B (H1 17 / H2 13.5 / H3 11.5pt)
- To change globally: edit make_reference.py (the font()/space() calls) and rebuild.

5. Known follow-ups

- **Narration audio** is keyed to chapter numbers in frontend/lib/narration.ts; if chapters are renumbered, the audio must be regenerated (TTS) to match.
- A true **print PDF** is best produced from the .docx via Word/Google Docs export.
