

# Vermont Health Platform — Documentation

**Version:** 4.2.0 **Last Updated:** March 2026

## What Is This Platform?

The Vermont Health Platform (operating as **Health Transformation Review — HTR**) is a full-stack healthcare intelligence and transformation platform. It combines a real-time content intelligence engine, an AI-powered research analyst, structured learning programs, interactive analytical tools, and expert advisory services — all organized around a five-pillar framework for understanding U.S. healthcare transformation.

## Documentation Index

| Document                                 | Audience               | Description                                                   |
|------------------------------------------|------------------------|---------------------------------------------------------------|
| <a href="#">User Guide</a>               | All users              | How to use every feature of the platform                      |
| <a href="#">Technical Architecture</a>   | Developers, architects | System design, AI pipeline, database schema, component map    |
| <a href="#">Developer Guide</a>          | Developers             | Local setup, environment variables, API reference, deployment |
| <a href="#">Content Management Guide</a> | Editors, admins        | Managing content in Sanity CMS, sync behavior, content types  |

## Platform at a Glance

### The Five-Pillar Framework

All content, tools, and advisory services are organized around five interconnected dimensions of U.S. healthcare transformation:

| Pillar            | Color    | Focus                                                        |
|-------------------|----------|--------------------------------------------------------------|
| <b>Policy</b>     | Sky Blue | Federal/state legislation, regulation, mandates, feasibility |
| <b>Economics</b>  | Emerald  | Value-based care, markets, labor, investment                 |
| <b>Technology</b> | Indigo   | AI/ML, digital health, security, workflow automation         |
| <b>Clinical</b>   | Red/Rose | Hospital-at-home, precision medicine, virtual care           |
| <b>Equity</b>     | Amber    | SDOH, algorithmic bias, access disparity                     |

### Technology Stack

| Layer    | Technology                                                                                |
|----------|-------------------------------------------------------------------------------------------|
| Frontend | Next.js 16 (App Router), React 19, TypeScript, Tailwind CSS 4                             |
| Backend  | FastAPI (Python), Uvicorn ASGI                                                            |
| AI / RAG | LlamaIndex, Groq (Llama 3.1/3.3), Anthropic (Claude Sonnet 4.6), OpenAI (embeddings, TTS) |
| Database | Supabase (PostgreSQL + pgvector)                                                          |
| CMS      | Sanity (headless)                                                                         |
| Auth     | Supabase Auth (JWT, HS256)                                                                |
| Payments | Stripe                                                                                    |

| Layer      | Technology                           |
|------------|--------------------------------------|
| Hosting    | Vercel (frontend), Railway (backend) |
| Monitoring | Sentry, Web Vitals                   |

User Roles & Tiers

| Role         | AI Model          | Features                                |
|--------------|-------------------|-----------------------------------------|
| free         | Llama 3.1 8b      | Public pillar content, academy browsing |
| subscriber   | Llama 3.3 70b     | Full AI chat, The Wire, Research Lab    |
| student      | Llama 3.1 8b      | Academy-focused learning path           |
| professional | Llama 3.3 70b     | Full platform + agentic AI tools        |
| advisory     | Claude Sonnet 4.6 | All features + advisory services        |
| admin        | Claude Sonnet 4.6 | Full platform + admin panel             |
